

FOR COLLAPSIBLE STOCK CARBINES

- Ambidextrous
- No Weapon Disassembly Required

WARNING!

BE CERTAIN THE WEAPON IS UNLOADED!

Keeping your finger away from the trigger, remove the ammunition

magazine, retract and lock the bolt carrier rearward AND VISUALLY & PHYSICALLY INSPECT for the presence of any ammunition. When you are POSITIVE the weapon

contains NO ammunition, SAFE the weapon and set aside for installation. This mount is designed and intended to support the weight of a typical M4 weapon.

INSTALLATION INSTRUCTIONS

Make sure that the buffer tube is free of dirt and oil. Place the Top Cap on the buffer tube behind the castle nut. From the bottom of the weapon, raise the Bottom Cap and hold in place. Insert four dry-locked fasteners into the Top Cap and tighten in a crosswise pattern to ensure even pressure between all fasteners.

DO NOT OVERTIGHTEN!

This mount exerts substantial clamping force, and only needs the fastener to be snug, and no more. If a gap exists between Top and Bottom Caps and fasteners are snug, **DO NOT** attempt to tighten further to eliminate the gap! The gap is normal

and excessive tightening will only damage the fasteners and Bottom Cap. Fasteners be be snug when finished. Attach supplied Sling Swivel by depressing pushbutton in center, inserting the swivel all the way into the sling mount hole and releasing the pushbutton. Tug on the sling swivel to ensure it is fully seated before adding load to the sling.
